evening.

The suspects were alleged to have been involved in the killing of the late Ponzhi Kwallak, the traditional ruler of Kwallak community, who was reportedly attacked and killed in his residence af-

ter assailants stormed his home and made away with his motorcycle and mobile phone on Thursday night.

Sources in the area said the killing of the monarch had thrown the community into mourning and tension.

According to residents, the suspects, said to be three in number, were apprehended by locals

while allegedly trying to sell the stolen motorcycle and reportedly confessed to the crime.

It was gathered that some residents were attempting to hand the suspects over to security operatives before hoodlums in their numbers overpowered the youths, seized them, and set them ablaze not far from the Langtang North Local

Government Council Secretariat.

A source, who spoke on condition of anonymity, said: "The suspects were caught by members of the community and allegedly confessed before the angry mob descended on them and burnt them."

The source added that the late monarch was attacked in his residence, shot, and dispossessed of his motorcycle and phone before the assailants fled.

Efforts to get official confirmation from security agencies proved abortive as of the time of filing this report.
